A Legacy Improved Through Evolution

RACE® EVO is the ultimate evolution of our popular and proven RaCe rotary system. Highly dependable original RaCe features combined with proprietary heat treatment and higher rotation speed capability, make **RACE® EVO** instruments even safer, easier to control and more efficient than ever before.

Exclusive heat treatment combined with legacy RaCe features provide the perfect combination of strength, durability and control. With unmatched resistance to cyclic fatigue, optimised yet non-intrusive cutting efficiency, and a low screwing effect, **RACE® EVO** is designed to be safe.

RACE® EVO specific heat treatment provides unprecedented mechanical properties, which in turn allow higher speed for quicker and more comfortable treatment for patients.

The RaCe design and over 20 years of trusted performance associated with higher speed, bring improved efficiency with a familiar feel to **RACE® EVO** instruments.

*For best results, it is recommended that **RACE® EVO** instruments should be used at 1,000 rpm (minimum 800 rpm).

Your Approach. Your Choice.

RACE® EVO allows you to choose your therapeutic approach. Our full selection of instruments lets you successfully treat various canal anatomies. Simply start with your basic instrument sequence, then easily switch to the next size for wider canal shaping when necessary.

ONE SEQUENCE FOR MOST OF YOUR CASES

Higher Flexibility for a New Level of Confidence

RACE® EVO instruments retain the same design features as RaCe, with the added benefit of increased flexibility. The exclusive heat treatment process, recognisable by the blue colour of the instrument, provides up to 1.4 times more flexibility over RaCe for higher performance and smoother progression.

FLEXIBILITY
x 1.4*

Improved Cutting Efficiency

The sharp-edged, triangular **RACE® EVO** design combined with higher rotation speed delivers up to 1.5 times higher cutting efficiency than RaCe.

* Based on internal laboratory results, using **RACE® EVO 4%**.

Guided by Absolute Control for over 20 Years

Beyond increased flexibility, improved cyclic fatigue resistance and enhanced cutting capabilities, **RACE® EVO** instruments come with the same built-in benefits as our proven RaCe design.

Greater Resistance to Cyclic Fatigue

RACE® EVO provides up to 2.8 times higher resistance to cyclic fatigue than its predecessor, RaCe. This reduces the risk of instrument breakage and allows a higher rotation speed, enhancing overall patient safety and comfort.

* Based on internal laboratory results, using **RACE® EVO 4%**.

** Based on internal laboratory results ; time to fracture at recommended speed.

The exclusive design of our patented alternative cutting edge reduces the screwing effect, promoting better control of the instrument's progression in the canal.

RACE® EVO's unique rounded safety tip design allows for an efficient progression of the instrument along the canal.
